

PROFILE OF CHANGE IN THE CITY OF PITTSBURGH

Comparison of 2006-2010 and 2011-2015 American Community Survey (ACS)

Estimates for the City of Pittsburgh and Neighborhoods

PROGRAM IN URBAN AND REGIONAL ANALYSIS

UNIVERSITY CENTER FOR SOCIAL AND URBAN RESEARCH

UNIVERSITY OF PITTSBURGH

SEPTEMBER 2017

About the University Center for Social and Urban Research (UCSUR)

The University Center for Social and Urban Research (UCSUR) was established in 1972 to serve as a resource for researchers and educators interested in the basic and applied social and behavioral sciences. As a hub for interdisciplinary research and collaboration, UCSUR promotes a research agenda focused on the social, economic and health issues most relevant to our society. UCSUR maintains a permanent research infrastructure available to faculty and the community with the capacity to: (1) conduct all types of survey research, including complex web surveys; (2) carry out regional econometric modeling; (3) analyze qualitative data using state-of-the-art computer methods, including web-based studies; (4) obtain, format, and analyze spatial data; (5) acquire, manage, and analyze large secondary and administrative data sets including Census data; and (6) design and carry out descriptive, evaluation, and intervention studies. UCSUR plays a critical role in the development of new research projects through consultation with faculty investigators.

About the Program in Urban and Regional Analysis

UCSUR's program in Urban and Regional Analysis focuses promotes scholarly analysis of urban and regional problems through multidisciplinary research. Our projects and services further our understanding of the causes and consequences of economic and social change. The program provides research support and data analysis to the university community, regional nonprofit organizations, and policymakers. UCSUR is a research affiliate of the Pennsylvania State Data Center (PaSDC) and maintains the Pittsburgh REMI model for economic impact analysis and both economic and demographic forecasting for the southwestern Pennsylvania region. This report is part of a continuing effort to study patterns of change at the local level. Complementary programs supported by the program in Urban and Regional Analysis include the *Southwestern Pennsylvania Community Profiles* website (profiles.ucsur.pitt.edu), the *Western Pennsylvania Regional Data Center* (www.wprdc.org), and the *PittsburghTODAY* regional indicators program (www.pittsburghtoday.org).

Data and Methodology

This report compiles data from multiple years of the Census Bureau's American Community Survey (ACS) and summarizes recent demographic trends impacting the City of Pittsburgh. A profile of selected socioeconomic variables is compiled for the city and each of its component neighborhoods. These profiles can serve as a reference for major changes taking place within the city, and how those changes compare to other areas within the broader Pittsburgh metropolitan region.

The ACS uses a series of monthly samples to produce estimates of population characteristics for all areas within the United States. The ACS produces annual updates on population characteristics for larger geographic areas, those with a population greater than 65,000. For small geographic areas, including census tracts and block groups, the ACS reports data aggregated over five years of survey responses. City of Pittsburgh neighborhoods are currently defined as either a single census tract or a collection of census tracts and block groups, making the 5-year estimates the only ACS data available for neighborhood-level analysis. The data profiles compiled for this report compare ACS estimates data for two 5-year time periods: 2006-2010 and 2011-2015. Comparisons of multi-year ACS estimates over time should only be conducted between non-overlapping periods as is done here. Note that ACS estimates prior to 2006 did not include data on the population in group quarters. These two periods are the first two non-overlapping periods of 5-year ACS data that have been released which include the population in group quarters.

Profiles are compiled for 86 of the 90 neighborhoods as defined by the City of Pittsburgh's Department of City Planning. Excluded here are neighborhood-level profiles for the Central Business District (Downtown Pittsburgh), and the adjacent neighborhood of Bluff. Past census data has misallocated the location of institutionalized population resident in the Allegheny County Jail, which has impacted estimates for these neighborhoods. As a result, the profiles that could be generated from the ACS data do not reflect actual demographic change taking place in either neighborhood. Also excluded are profiles for the city neighborhoods currently defined as Chateau and South Shore, due to the minimal residential population in each neighborhood.

Also compiled are profiles for selected sub-areas within the Pittsburgh Metropolitan Statistical Area (MSA), currently defined as seven counties in southwestern Pennsylvania including Allegheny, Armstrong, Beaver, Butler, Fayette, Washington and Westmoreland counties. These sub-areas include: (1) the City of Pittsburgh; (2) the Pittsburgh MSA; (3) an area defined as the 6 counties of the Pittsburgh MSA with the exception of Allegheny County; (4) Allegheny County; and (5) the municipalities, or parts of municipalities, that are within Allegheny County, but outside of the City of Pittsburgh.

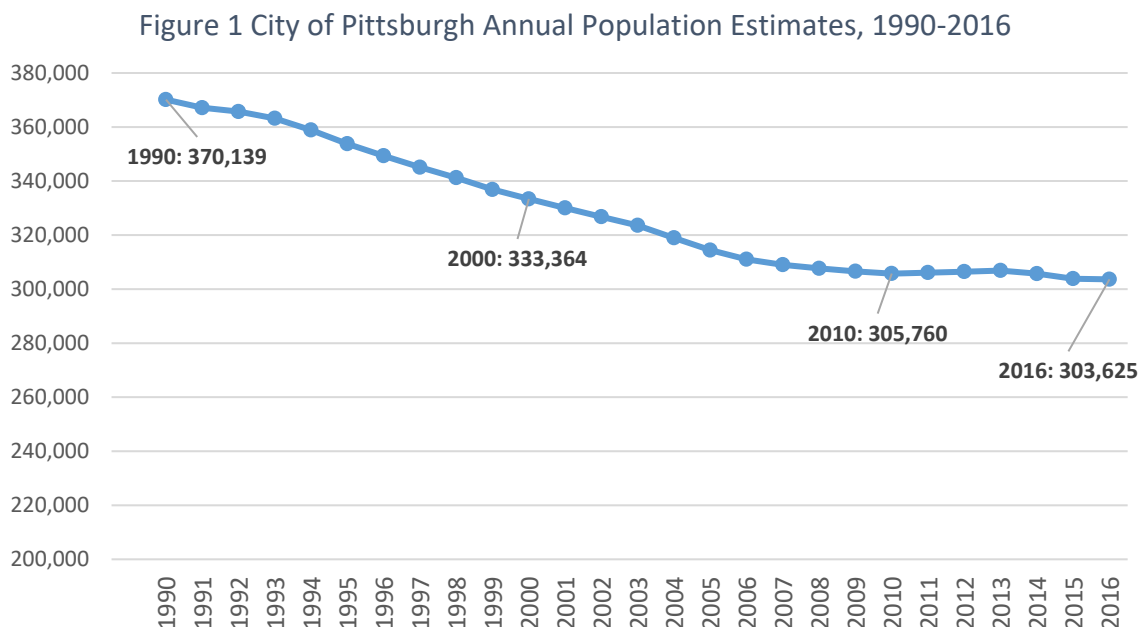

The ACS is a sample based data collection program. The 5-year ACS estimates, by amalgamating a larger amount of survey responses, have smaller errors than 1-year ACS estimates for the same geography. Nonetheless, sample and other measurement errors can impact the data presented here, especially for estimates compiled for smaller geographies including city neighborhoods and small population subgroups. The comparison of the 2006-2010 and 2011-2015 periods uses data over a 10 year period, but data for each period is presented as an average over each five year period. Trends identified by comparing the two periods can be interpreted as change over a five year period. Not all trends identified in these profiles have necessarily continued, and some trends may have accelerated. These profiles are intended to be one data source to be used in conjunction with other data for those studying change within the City of Pittsburgh and its component neighborhoods.

Population Trends in the City of Pittsburgh

Current demographic trends in the City of Pittsburgh contrast an emerging stability for the city's overall population with continuing change in the characteristics of city residents. The modern city of Pittsburgh has been shaped by nearly continuous population decline through much of the 20th Century. Historical population data typically cites the city's peak population as the 676,806 residents enumerated in the 1950 decennial census, with ongoing decline recorded over each subsequent decade through 2010.

Shifting away from that long-term decline, recent estimates indicate that the population of the City of Pittsburgh has maintained a certain level of stability over the most recent decade. Data from the Census Bureau's Population Estimates Program (PEP) show that the city's population increased slightly between 2010 and 2011 for the first time in several decades. More recent population estimates do not indicate that the city sustained population gains, but only minimal population decline has been estimated in subsequent years. Between 2010 and 2016, the Census Bureau estimates that the city's population declined from 305,760 to 303,625, an average annual rate of population decline less than 0.1%, the slowest rate of population decline in over six decades.

The recent stability in the population within the City of Pittsburgh masks ongoing and significant changes in the characteristics of the city's resident population. The following sections highlight a summary of major socioeconomic trends impacting the City of Pittsburgh and how those trends compare to changes within the broader Pittsburgh metropolitan region and the nation.

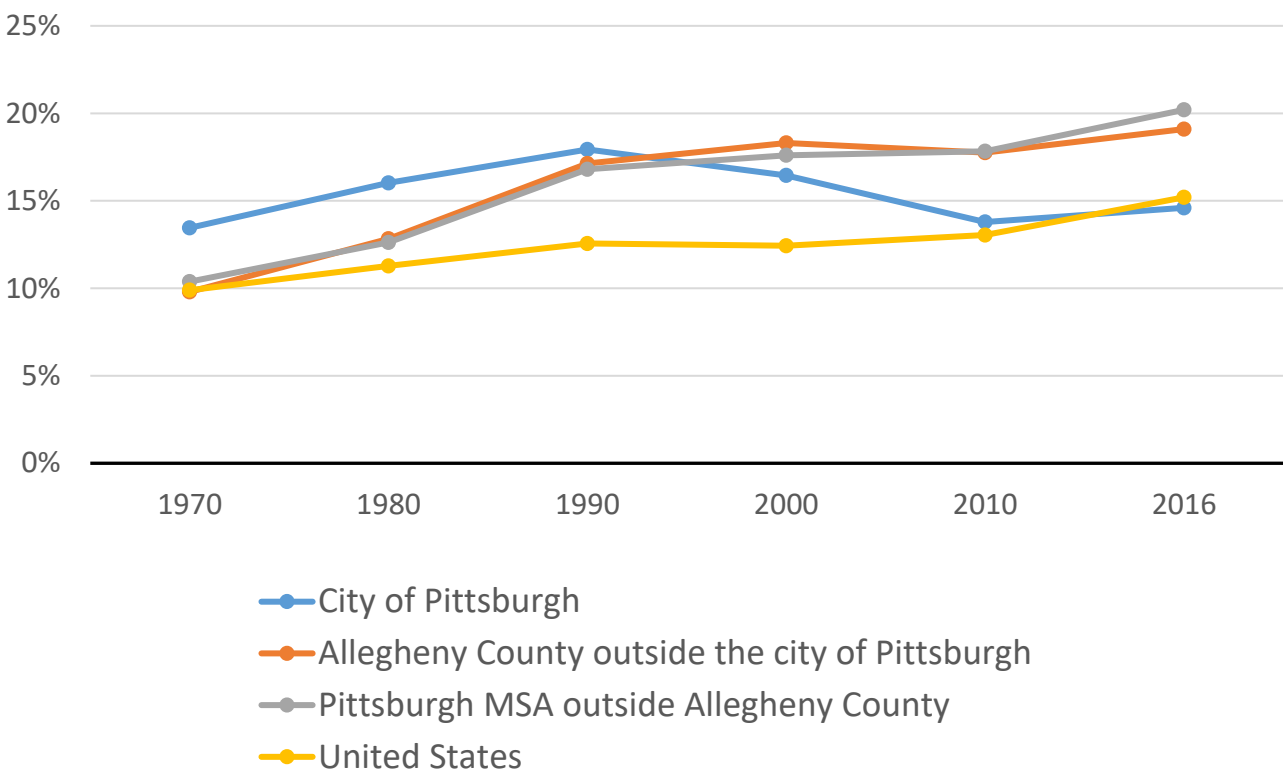

Age Profile of the City Pittsburgh

In the decades immediately following World War II, suburbanization emerged as a major factor depressing the population of the City of Pittsburgh. More likely to leave the city were younger families, resulting in an increasingly older age profile for city residents compared to either the nation or suburban areas of the Pittsburgh region. This trend was later compounded by regional economic change and the decline of the region's heavy industry. Through the 1980s, the outmigration of younger age cohorts from most areas of southwestern Pennsylvania accelerated while the region retained a greater proportion of its older residents. The proportion of the population age 65 and over living in the City of Pittsburgh peaked during the 1990s.

Since the mid-1990s, ongoing shifts in the region's demographics have not been even across southwestern Pennsylvania. While the proportion of elderly in the national population has slowly increased, the elderly population began to make up a smaller proportion of the population within the City of Pittsburgh. The latest ACS estimates for 2016 (based on ACS 1-year estimates data) show that the proportion of elderly within the City of Pittsburgh (14.6 %) is below the national average (15.2%). However this trend has not been replicated across all areas of the Pittsburgh MSA. The proportion of the population made up of those age 65 and over has been increasing for both the communities within Allegheny County, but outside of the City of Pittsburgh, and the Pittsburgh MSA region outside of Allegheny County.

Figure 2 Proportion of Population Age 65 and Over, 1970-2016

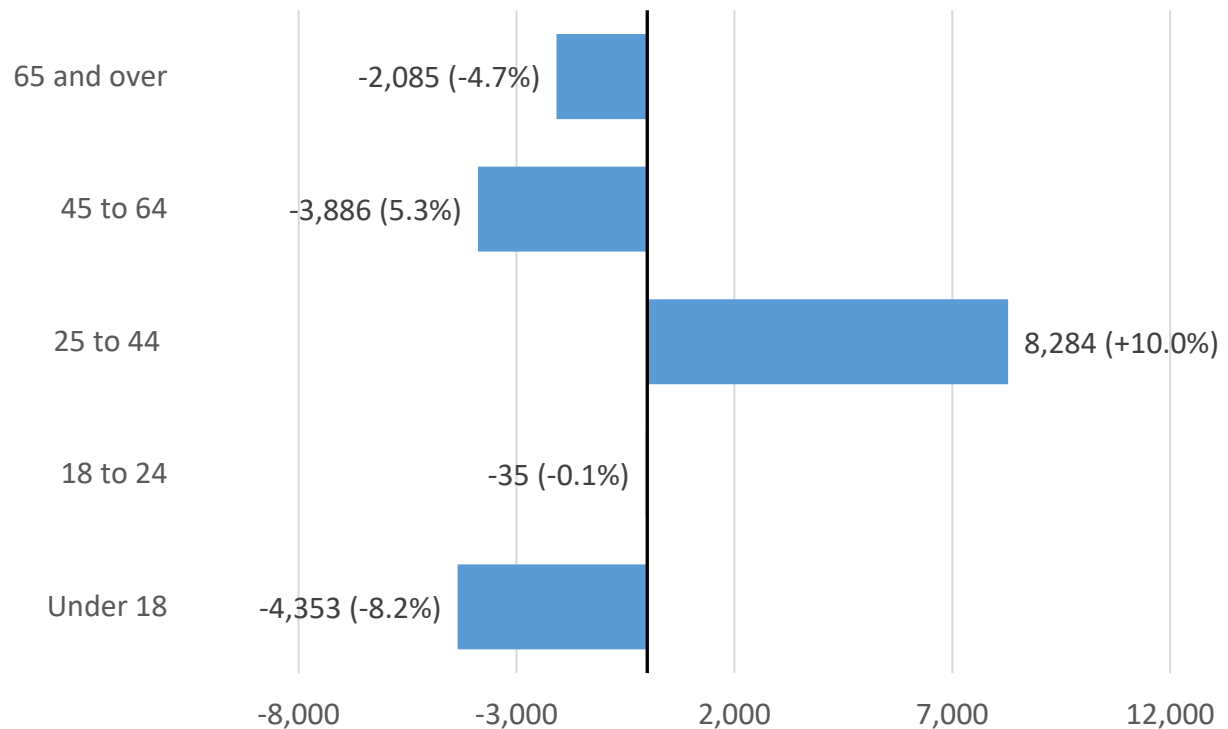

SOURCE: 1970-2010 data from the decennial census, various years. 2016 data is from American Community Survey (1-year) estimates.

Profile of Change in the City of Pittsburgh – September 2017

The City of Pittsburgh has been experiencing decline in both the youngest and oldest age groups, with gains concentrated in young adults. Between the 2006-2010 and 2011-2015 periods, ACS estimates show that the population age 65 and over declined by 2,085 or 4.7%, while the population between the ages of 25 and 44 experienced a gain of 8,284 or 10%. At the same time, the population age 45-64 remained declined by 5.3%, and the population under age 18 declined by 4,353 or 8.2%.

Figure 3 City of Pittsburgh - Population Change by Age Group Between 2006-2010 and 2011-2015 Periods

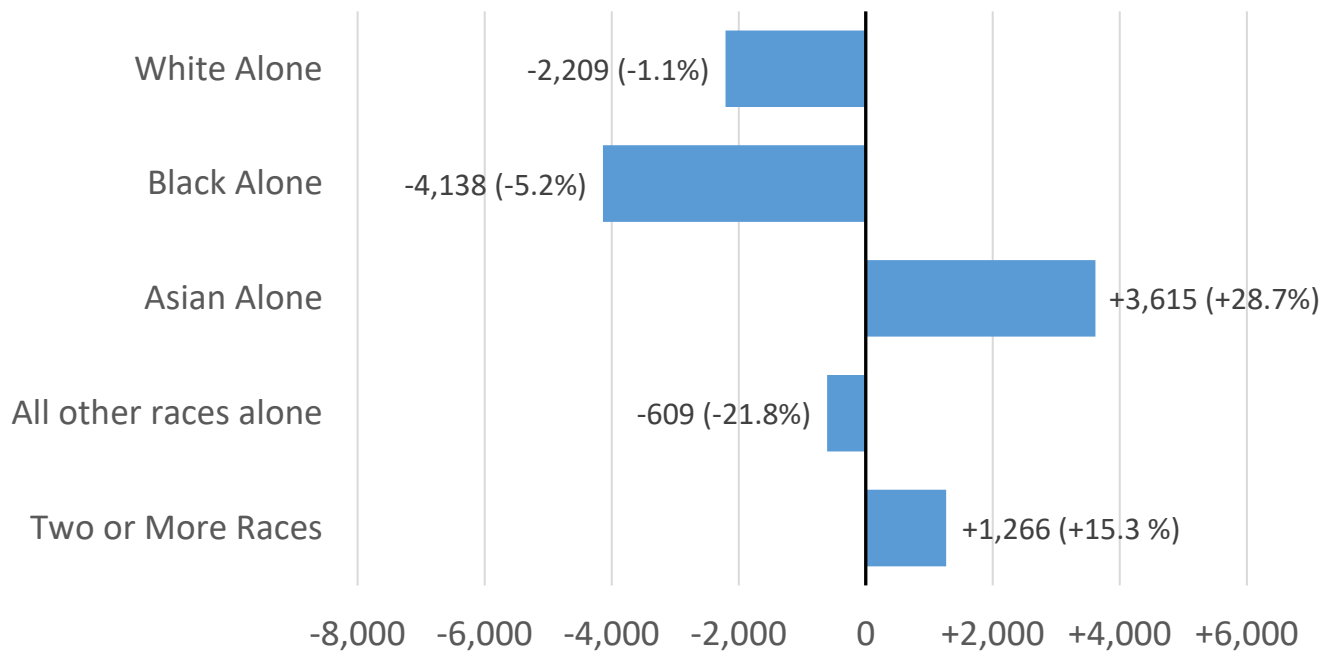

Profile of Change in the City of Pittsburgh – September 2017

Race

Also continuing is a shift in the racial composition of City of Pittsburgh residents. Between the 2006-2010 and 2011-2015 periods, the Black-alone population within the City of Pittsburgh decreased by 4,138 or 5.2%, while the city's White-alone population declined by 2,209 (-1.1%). Over the same period, the city's Asian-alone population increased by 3,615 (+28.7%). In areas within Allegheny County, but outside the City of Pittsburgh, the Black-alone population increased by 5,111, a gain of 7.1%. These changes reflect a continuation of a shift of the African-American population within Allegheny County. In 1970, just under 72% of Allegheny County's Black population lived within the City of Pittsburgh. Between the 2006-2010 and 2011-2015 periods the majority of Black residents within Allegheny County shifted from a majority living within the City of Pittsburgh to a majority living elsewhere within the county. ACS 1-year estimates since 2012 consistently indicate that the majority of Allegheny County's Black population now lives outside of the City of Pittsburgh, reaching over 55% in the 2016 1-year ACS estimates.

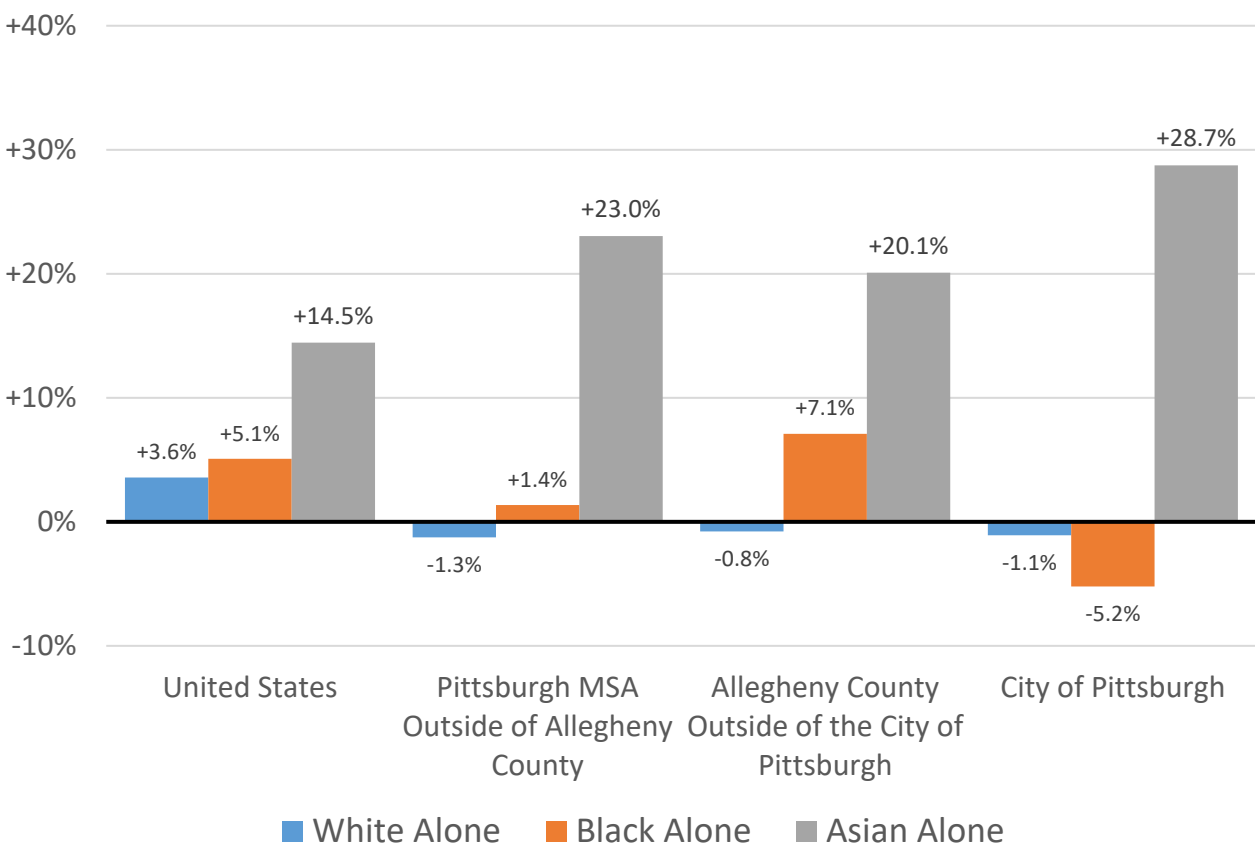

Figure 4 City of Pittsburgh – Population Change by Race Between 2006-2010 and 2011-2015 Periods

Profile of Change in the City of Pittsburgh – September 2017

While the Asian-alone population has been increasing across the nation, the Pittsburgh region has been experiencing relatively faster rates of increase. Between the 2006-2010 and 2011-2015 periods, the City of Pittsburgh experienced an increase of 3,615 (+28.7%) Asian-alone residents, far ahead of the 14.5% increase for the nation. In areas elsewhere within Allegheny County, but outside of the City of Pittsburgh, the Asian-alone population increased by 4,035 (+20.1%). Counties within the Pittsburgh MSA, but outside Allegheny County, experienced a smaller increase in Asian-alone population (+1,524), but that increase represented a 23.0% gain between the two periods.

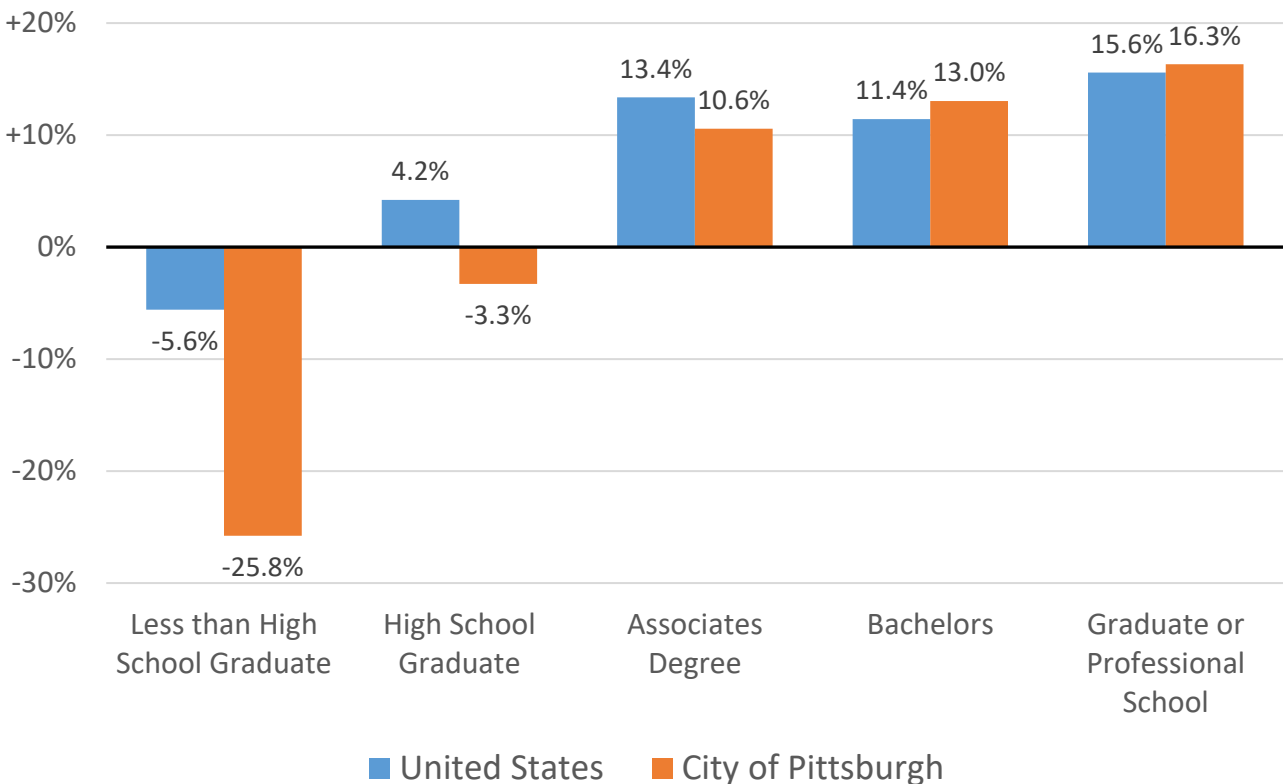

Figure 5 Comparison of Population Changes by Race Between 2006-2010 and 2011-2015 Periods

Educational Attainment

The educational attainment of City of Pittsburgh residents continues to increase as the composition of the population shifts. Compared to the nation, the City of Pittsburgh experienced a slightly faster increase in the percentage of residents with a bachelor's degree, (+13.0% vs. +11.4%) between the 2006-2010 and 2011-2015 periods. The city also experienced a faster rate of increase in the proportion of population with a graduate or professional degree (+16.3% vs. +15.6% for the U.S.). The city experienced a drop in the percentage of residents with only a high school degree (-3.3%) and a significant decline in the population with less than a high school degree (-25.8%). The large decline in the percentage of the population with less than a high school degree is in part a reflection of the decline among the city's elderly population. Educational attainment patterns differ markedly over time, and older age cohorts generally were far less likely to have achieved high school or college-level degrees compared to younger age groups.

Figure 6 Population Change by Educational Attainment Between 2006-2010 and 2011-2015 Periods
City of Pittsburgh and the United States

Note: Categories represent highest level of educational attainment and are mutually exclusive. High school graduates include those with some college, but not obtaining any additional degree.

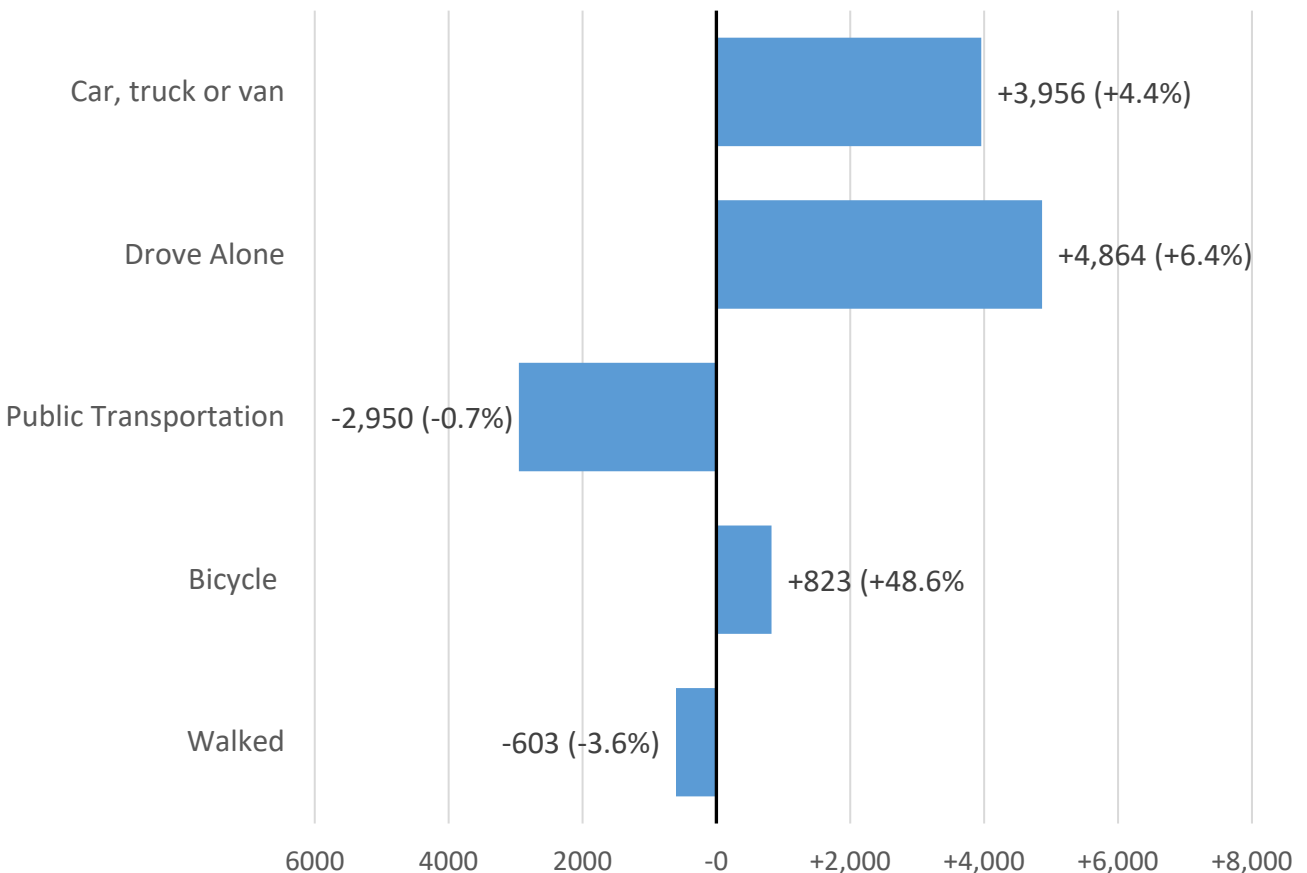

Profile of Change in the City of Pittsburgh – September 2017

Commuting

Commuting patterns among City of Pittsburgh residents show a shift away from all modes of public transportation as a greater number of workers use cars, trucks, or vans when traveling to their places of employment. ACS estimates show that the use of public transportation among workers living in the City of Pittsburgh declined by 2,950 (or 10.7%) between the 2006-2010 and 2011-2015 periods. Those driving, or who were passengers in privately owned vehicles, increased by 3,956 (or 4.4%) over the same period. The percentage of those who drove alone to work increased by a greater percentage (+6.4%), reflecting a decrease in the proportion of commuters traveling by vehicle, but with higher vehicle occupancy rates, such as in carpools.

Commuting by bicycle showed the greatest percentage increase between the 2006-2010 and 2011-2015 periods. Between the two periods, 823 more city residents commuted by bicycle, an increase of 48.3%, while commuters who walked to work declined by 603 or 3.6%. It is important to note that commuting data collected by the ACS reflect the transportation mode used by workers traveling to their place of employment and does not capture bicycle usage for other purposes, including transportation to school, recreation, or for other purposes.

Figure 7 Change in Transportation Mode for Commuters between 2006-2010 and 2011-2015 Periods
City of Pittsburgh

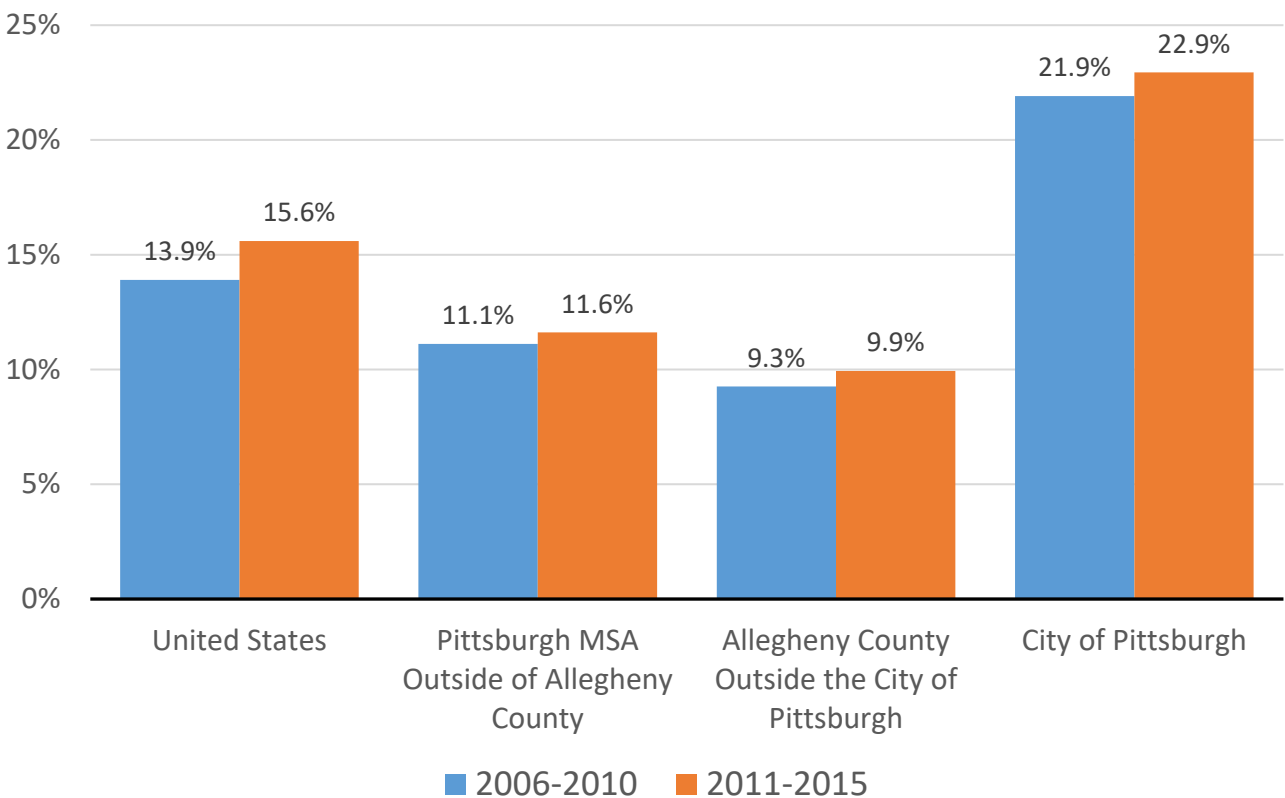

Profile of Change in the City of Pittsburgh – September 2017

Poverty

Poverty rates increased between the 2006-2010 and 2011-2015 periods for the City of Pittsburgh, as it did for other areas within the Pittsburgh MSA and for the United States. The poverty rate for City of Pittsburgh residents increased from 21.9% to 22.9% between the two periods. The city's poverty rate increased by a larger percentage than in areas of Allegheny County, but outside the City of Pittsburgh (9.3% to 9.9%) or in areas of the Pittsburgh MSA outside of Allegheny County (11.1% to 11.6%). All subareas experienced a smaller increase in the poverty rate compared to the nation which increased by 1.7 percentage points (13.9% to 15.6%) between the two periods.

Figure 8 Poverty Rates for 2006-2010 and 2010-2015 Periods

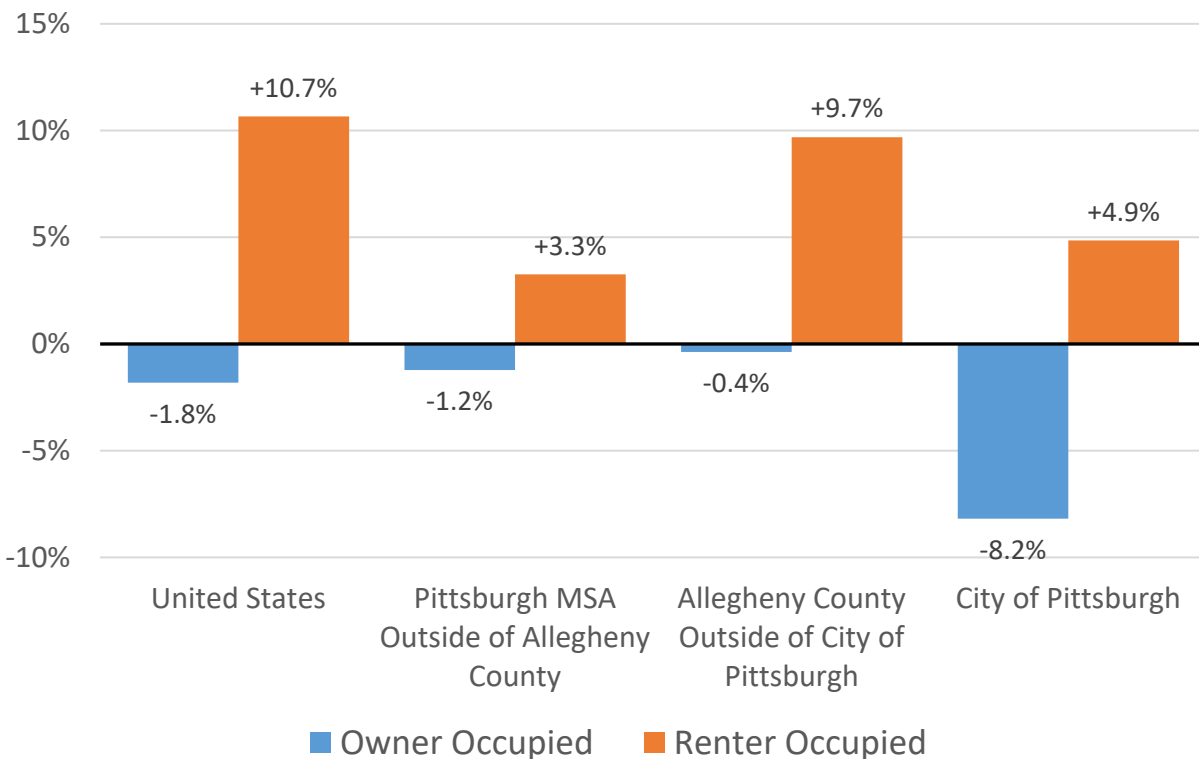

Profile of Change in the City of Pittsburgh – September 2017

Housing Tenure

Between the 2006-2010 and 2011-2015 periods, the City of Pittsburgh has experienced a significant decline in the number of owner occupied housing units (-8.2%), offset by a smaller but significant increase in the number of renter occupied housing units (+4.9%). Areas within Allegheny County, but outside of the City of Pittsburgh, experienced an even greater increase in renter occupied housing units (+9.7%), but only a minimal decline in the number of owner occupied units (-0.4%).

The city's increase in rental units does not reflect additional units that may have been built or occupied since 2015. Nonetheless the city's increase in the total number of occupied rental units was significantly slower than experienced by the nation between these two periods. While the nation also experienced a decline in the number of owner occupied units (-1.8%), the city is experiencing a much more rapid contraction (-8.2%). Between the 2006-2010 and 2011-2015 periods, the majority of occupied housing units within the city of Pittsburgh shifted from being majority owner occupied to renter occupied.

Figure 9 Comparison of Change in Number of Housing Units by Tenure Between 2006-2010 and 2011-2015 Periods

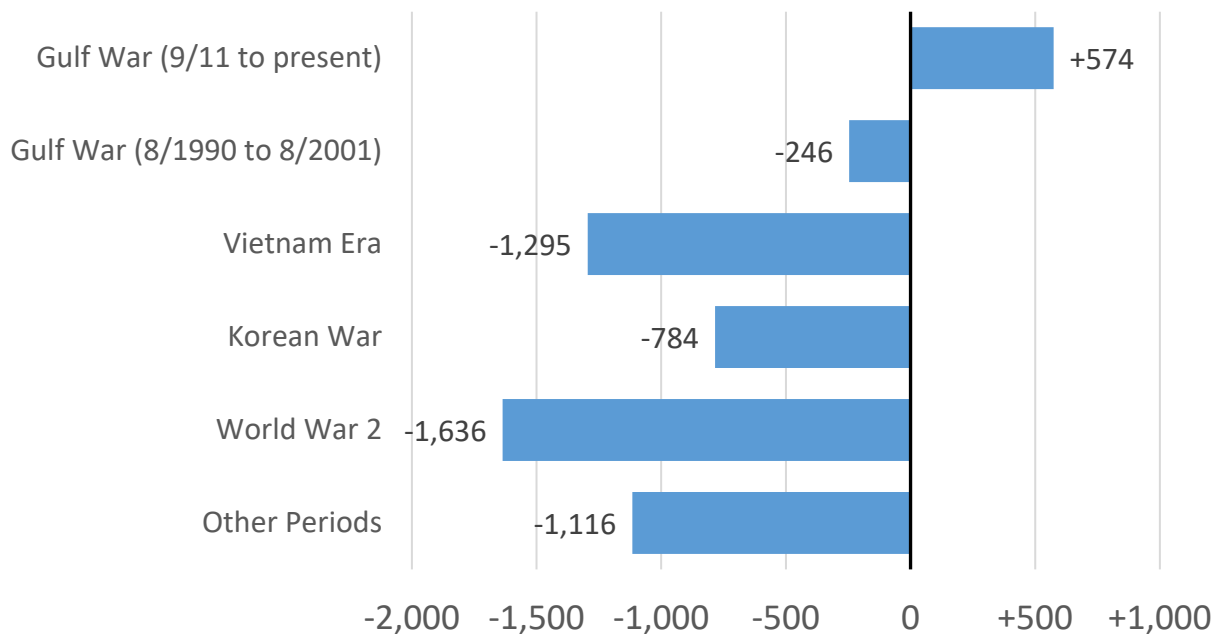

Profile of Change in the City of Pittsburgh – September 2017

Veterans

Change in the characteristics of the veterans' population reflects both ongoing demographic shifts and differences in the prevalence of military service across age groups. Overall the population of veterans residing within the City of Pittsburgh declined by 20% between the 2006-10 and 2011-2015 periods. That overall decline mostly reflects the contraction of older groups in the city and exceeds the comparable decline in the national veterans' population between the two periods (-11.2%). Older age groups, and in particular older males, are far more likely than younger age groups to have military service. Though the population of veterans with service since September 2001, a group that includes any new civilian veterans completing military service, has been increasing in the city, that increase only offsets a fraction of the decline in the number of veterans from other eras.

The population of veterans living in the City of Pittsburgh whose latest period of service is prior to September 2001 has been decreasing for the city as it has been for the nation. The largest decline has been in the oldest group of veterans with service in World War II, which contracted by 1,636 between the 2006-2010 and 2011-2015 periods. Currently the largest group of veterans in the City of Pittsburgh, as it is for the nation, are veterans with Vietnam era service.

Figure 10 City of Pittsburgh – Change in Veterans Population Between 2006-2010 and 2011-2015 Periods

Note: For veterans with service in multiple eras, period reflects the latest period of service.

Profile of Change in the City of Pittsburgh – September 2017

Notes:

All data except national data was compiled via the Census Bureau's application programmer interface (API) using the R programming language. Data was compiled for two ACS 5-year periods: 2006-2010 and 2011-2015. Data for the United States was compiled from the Census Bureau's *American FactFinder* internet interface (<https://factfinder.census.gov/faces/nav/jsf/pages/index.xhtml>). The following data itemizes the specific ACS data tables used to compile individual profiles.

	ACS 2006-2010 Table	ACS 2011-2015 Table
Population by Race	B02001: Race	B02001: Race
Population by Age Group	B01001: Sex by Age	B01001: Sex by Age
Educational Attainment	B15003: Educational Attainment for the Population 25 Years and Over	B15002: Educational Attainment for the Population 25 Years and Over
Commuting	B08301: Means Of Transportation to Work	B08301: Means Of Transportation to Work
Housing Tenure	B25003: Tenure	B25003: Tenure
Poverty	C17002: Ratio Of Income To Poverty Level In the Past 12 Months	C17002: Ratio Of Income To Poverty Level In the Past 12 Months
Veterans Status	B21002: Period Of Military Service For Civilian Veterans 18 Years And Over	B21002: Period Of Military Service For Civilian Veterans 18 Years And Over

All levels of educational attainment represent the highest degree attained and each group is mutually exclusive. The number of high school graduates include those with a high school degree or equivalent, but no additional degree. This group will include those with some college, but with no additional degree. The number with associates' degrees is itemized separately.

Veterans with service in multiple eras are grouped by latest period of service. For example, Gulf War (September 2001 to present) veterans include some veterans with service in the Gulf War (August 1990 to August 2001), Vietnam Era, and the Korean War. The category "Other Periods" include service exclusively between any of the itemized periods or before World War II.

Commuting table excludes the number who commute by all other means including taxicab, motorcycle, any other mode of travel and also excludes those who worked at home.
