About the University Center for Social and Urban Research (UCSUR)

The University Center for Social and Urban Research (UCSUR) was established in 1972 to serve as a resource for researchers and educators interested in the basic and applied social and behavioral sciences. As a hub for interdisciplinary research and collaboration, UCSUR promotes a research agenda focused on the social, economic and health issues most relevant to our society. UCSUR maintains a permanent research infrastructure available to faculty and the community with the capacity to: (1) conduct all types of survey research, including complex web surveys; (2) carry out regional econometric modeling; (3) analyze qualitative data using state-of-the-art computer methods, including web-based studies; (4) obtain, format, and analyze spatial data; (5) acquire, manage, and analyze large secondary and administrative data sets including Census data; and (6) design and carry out descriptive, evaluation, and intervention studies. UCSUR plays a critical role in the development of new research projects through consultation with faculty investigators.

The long-term goals of UCSUR fall into three broad domains: (1) provide state-of-the-art research and support services for investigators interested in interdisciplinary research in the behavioral, social, and clinical sciences; (2) develop nationally recognized research programs within the Center in a few selected areas; and (3) support the teaching mission of the University through graduate student, post-doctoral, and junior faculty mentoring; teaching courses on research methods in the social sciences; and providing research internships to undergraduate and graduate students. Achieving these goals requires that we continually upgrade and improve the research infrastructure of the Center, and that we recruit, develop, and maintain a core staff of investigators capable of being leaders in their fields.

About the Urban and Regional Analysis Program (URA)

UCSUR's Urban and Regional Analysis Program (URA) focuses on economic change in the Pittsburgh region. UCSUR is a research affiliate of the Pennsylvania State Data Center and maintains the Pittsburgh REMI model, an economic impact model for conducting economic impact analysis and economic and demographic forecasting for the greater Southwestern Pennsylvania Region. This report is part of the Program's decades-long work to studying patterns of change in Pittsburgh neighborhoods.

The URA Program also maintains the **Southwestern Pennsylvania Community Profiles** project **(https://profiles.ucsur.pitt.edu)**, an interactive website that provides easy access to community data for local stakeholders across ten counties in Southwestern Pennsylvania and the **Western Pennsylvania Regional Data Center (www.wprdc.org)**, created in 2015 in partnership with Allegheny County and the City of Pittsburgh to provide a shared technological and legal infrastructure to support research, analysis, decision -making, and community engagement.

Table of Contents

Neighborhood/Area Index

Overview

This report compiles data from the U.S. Census Bureau's American Community Survey (ACS) for City of Pittsburgh neighborhoods. The City of Pittsburgh defines 90 distinct neighborhoods, each of which is a collection of one or more census tracts or census block groups. The index of specific census tracts or census block groups to City of Pittsburgh neighborhoods is included in the appendix to this report.

The ACS replaced what was known as the "long form" of the decennial census, last conducted for the 2000 census. The majority of data collected by the decennial census in past decades came from a longer set of questions asked of one in six households in the nation.

The data compiled in this report is from the 6th annual release of 5-year estimates data from the ACS program and reflects data collected over the 2010-2014 period. This 5-year estimate for the period 2010-2014 can be compared directly to previous 5-year estimates, first produced for the 2005-2009 period.

In addition to the previous report based on ACS data, this report follows similar reports of neighborhood conditions compiled by UCSUR. Past neighborhood data compendiums are available on UCSUR's web page (www.ucsur.pitt.edu) and include sets of neighborhood reports from 1974, 1977, and 2000. UCSUR produced "The Social Geography of Allegheny County" for 1990 Census data which is available in print form upon request. Past projects focused on neighborhood level data for the City of Pittsburgh include the Pittsburgh Atlas Project from the 1970s, and the Pittsburgh Neighborhood Information System (NIS) generated in the 1980s, which compiled data for all city neighborhoods back to 1930. From that in the 2000s, UCSUR produced the Pittsburgh Neighborhood and Community Information System (PNCIS), an interactive GIS system of address-level data for the City of Pittsburgh and other communities in Allegheny County. Today, both the Southwestern Pennsylvania Community Profiles and Western Pennsylvania Regional Data Center provide community data at neighborhood scale.

Using the American Community Survey

This American Community Survey (ACS) uses a series of monthly samples to produce annually updated data for the same small areas (census tracts and block groups), formerly available only through the decennial census sample. For neighborhood data, the major differences between the "long form" decennial census data and the ACS is that the ACS has a smaller sample size than the long form, but is conducted annually. Reporting frequency of ACS data depends on the size of the geographic unit. To obtain reliable estimates for small areas, multiple years of ACS data must be combined to produce a single indicator and data for smaller levels of geography are only reported by multi-year periods. For geographic areas with populations over 65,000, the ACS reports data for single years. For geographic areas with populations between 20,000 and 65,000, the ACS reports data derived from three years of survey responses. For geographic areas less than 20,000 in population, a level of geography that includes both census tracts and census blocks groups, the ACS reports data aggregated from five years of survey responses.

As described above, City of Pittsburgh neighborhoods are defined by one or more census tracts or by census block groups, a level of geography smaller than the census tract. Small area geographies in the ACS have significant margins

of error. Data and the associated margins of error are available via the Census Bureau. The nature of these errors should be taken into account when comparing neighborhoods with each other or comparing data compiled by the ACS with previous decennial censuses. Nonetheless, the ACS program provides annual updates for many types of data that previously were only available every ten years.

The profiles in this report use ACS data collected by survey responses between January 2010 and December 2014. This is the sixth annual update of 5-year estimates data from the ACS program and can be compared to previous 5-year estimates. Readers should note that because the population controls used in the ACS methodology for the first five-year 2005-2009 release used data dating back to the 2000 decennial census, the usefulness of the ACS for measuring absolute changes in population levels between reporting periods is limited. It is recommended that the data released by the ACS program should be used to understand the *characteristics* of specific geographic areas and not used as a reference for the specific *counts* of individuals, households, or housing units. Users should also note other differences between the census programs, including survey dates. The decennial census collected data at a point in time (reference date April 1 of the decennial year), while the ACS data is collected continuously throughout the year. Certain data can be impacted by seasonal trends throughout the year may see distinct differences in results between the two methodologies.

The table below itemizes the specific tables in the ACS 5-year estimates data used to compile the profile data in this report. The ACS tables are the source of the data used here, though specific categories are collapsed for the tables presented here.

American Community Survey Tables used to compile profile tables

Profile Table	Table	Census Table Name
Population by Race	B02001	Race
Family Structure	B11001	Household Type (Including Living Alone)
Population by Age Group	B01001	Sex By Age
Household Income	B19001	Household Income In The Past 12 Months
Poverty	C17002	Ratio Of Income To Poverty Level In The Past 12 Months
Tenure	B25003	Tenure
Educational Attainment	B15002	Sex By Educational Attainment For The Population 25 Years And Over
Commuting	B08006	Sex Of Workers By Means Of Transportation To Work

Neighborhood Profiles

The 2010-2014 American Community Survey (ACS) data has been compiled to produce neighborhood profiles for the City of Pittsburgh. These profiles reflect the characteristics of the residents of each identified neighborhood. The neighborhood definitions are those currently used by the City of Pittsburgh and have been matched by UCSUR to the boundaries of census tracts and census block groups. For historical comparisons, users should note that City of

City of Pittsburgh Neighborhood Profiles – American Community Survey
2010–2014 5-Year Estimates

Pittsburgh neighborhood definitions have changed over the decades. We also include individual profiles of the City of Pittsburgh, Allegheny County, and the seven-county Pittsburgh Metropolitan Statistical Area (MSA).

Changes made by the Census Bureau to the boundaries of census tracts in Allegheny County have impacted the data that can be compiled from the ACS for City of Pittsburgh neighborhoods. Beginning with revisions of tract boundaries in 2010, certain City of Pittsburgh neighborhoods are no longer uniquely defined by a census tract, or a set of census tracts, as had been the case in 2000. Some city neighborhoods are defined only by collections of census block groups, a level of geography smaller than a census tract, and in the ACS estimates, certain data that are available for census tracts are not reported for census block groups. As a result, this year's update does not include the follow, as included in the 2005-2009 report: Migration, Group Quarters and Nativity (place of birth).

City of Pittsburgh neighborhoods defined in part by census block groups*

Allegheny Center	Elliott	Ridgemont
Allegheny West	Esplen	Sheraden
Arlington	Fairywood	St. Clair
Arlington Heights	Glen Hazel	Terrace Village
Beltzhoover	Hays	West End
Bon Air	Hazelwood	West Oakland
Chartiers City	Mt. Oliver	Westwood
East Allegheny	North Shore	Windgap
East Carnegie	Oakwood	

*The neighborhood Chateau is excluded here because the ACS ample reported no data for the tract that makes up the neighborhood.
