## About this report

This document updates data previously compiled from the U.S. Census Bureau American Community Survey (ACS) for City of Pittsburgh neighborhoods. For more information on the background and methodology for the data compiled here, refer to the report *Profiles of Change in the City of Pittsburgh: Comparison of 2008-2012 and 2018-2022 American Community Survey Estimates for the City of Pittsburgh and Neighborhoods*, released June 2024 and available on the website for the University Center for Social and Urban Research (UCSUR): <https://ucsur.pitt.edu/>.

This document incorporates the latest five-year estimates distributed by the ACS for the 2019-2023 period and compares that with comparable data for the decade-earlier period: 2009-2013. The ACS conducts surveys of residents across the nation throughout the year and produces annual updates on population characteristics across a broad range of socioeconomic topics for geographic areas with populations greater than 65,000. For small geographic areas, including census tracts and block groups, the ACS produces estimates generated from data aggregated over five years of survey responses.

While the ACS also reports some data at the smaller *block group* level, many ACS tables are only available at the census tract level or larger levels of geography. City of Pittsburgh neighborhoods are typically made up of a partial census tract, a single census tract, or multiple census tracts, making the five-year estimates the only ACS data available for neighborhood-level analysis.

The ACS is just one source of data on population change. The Census Bureau also produces the decennial census, which is a complete enumeration of the nation's population every ten years. The decennial census is the best reference for population counts for a specific geography in the United States, but it produces only a specific set of demographic data limited primarily to population counts by age, race, and gender for a given area. Between decennial years, the Census Bureau also produces annual population estimates based on administrative and other data sources. Annual population estimates provide only limited data on changes in population characteristics and provide no data for areas smaller than municipalities.

In contrast to both the decennial census and annual population estimates, the ACS provides data across a range of economic and demographic topics. However, estimates produced by the ACS are subject to sampling and non-sampling errors. The Census Bureau advises that the ACS should principally be used to obtain population characteristics (percents, means, medians, and rates) rather than specific population counts.

This document provides profiles for a set of 65 neighborhoods, or groups of neighborhoods, as defined by the City of Pittsburgh's Department of City Planning. The City of Pittsburgh currently defines 90 individual neighborhoods within its borders. Where neighborhoods cross census tract boundaries in either the 2009-2013 or 2019-2023 periods, individual neighborhoods have been combined for the purposes of this report. For context, profiles for a set of larger geographies, including the City of Pittsburgh and the Pittsburgh Metropolitan Statistical Area (MSA), are also provided here.

Data used to produce these profiles will also be made available via the Western Pennsylvania Regional Data Center (WPRDC): <https://www.wprdc.org/>. This report was prepared by Christopher Briem ([cbriem@pitt.edu](mailto:cbriem@pitt.edu)) of the Urban and Regional Analysis Program at the University of Pittsburgh's University Center for Social and Urban Research (UCSUR).

## City and Regional Profiles

Included here are data profiles for the United States and sub-areas of southwestern Pennsylvania, including: (1) the Pittsburgh Metropolitan Statistical Area (MSA); (2) Allegheny County; (3) the seven counties of the Pittsburgh MSA that are outside of Allegheny County; (4) the City of Pittsburgh; and (5) the areas within Allegheny County outside of the City of Pittsburgh.

Note that the Pittsburgh Metropolitan Area (MSA) is currently defined as eight counties in southwestern Pennsylvania: Allegheny, Armstrong, Beaver, Butler, Fayette, Lawrence, Washington, and Westmoreland. The Pittsburgh MSA was redefined in 2023 to include Lawrence County. Previously, the Pittsburgh MSA was defined as seven counties. The Pittsburgh MSA profile here reflects the current eight-county definition of the MSA in both time periods.

*Counties of the Pittsburgh Metropolitan Statistical Area (MSA)*

## City of Pittsburgh Neighborhood Profiles

The City of Pittsburgh’s Department of City Planning currently identifies 90 individual neighborhoods within the City of Pittsburgh. Here profiles are compiled for 65 individual neighborhoods, or neighborhood groups defined specifically for this report. No profile was created for the city neighborhoods of *Chateau* and *South Shore* due to the low population counts in those neighborhoods.

Where a city neighborhood was not coterminous with the boundaries of either a single census tract or a group of census tracts, neighborhoods were combined into a neighborhood group. These groupings allowed for comparable profiles to be compiled for consistent geographies for both five-year periods (2009-2013 and 2019-2023) using census tract-level data compiled from the American Community Survey (ACS) five-year estimates data. Note the neighborhood groupings used here may not match groupings used by other projects.

The figure below highlights all 90 neighborhoods currently defined by the City of Pittsburgh, and shows which neighborhoods were combined into larger neighborhood groups for the purposes of this report.

*City of Pittsburgh Neighborhoods and Neighborhood Groups*
